Junior Software Developer with beginning knowledge of DevOps, I've been investigating and getting information in this area for more than 3 years but I only have 1 year of professional experience. Through my professional experience I've created and developed four mobile applications that in that time were working fine with Flutter (Dart). I want to expand my knowledge in DevOps because in five years from now I'm going to be a Site Reliability Engineer.

Employment history

Software Developer, BertCord, Jul 2022 - Jan 2023
Dominican Republic

- Led the migration of an mobile app Kotlin-based to Flutter, making it available to Android and iOS systems and devices.
- Public the other mobile app of the company through Google Apps Store only for the employees, in order for making tests.
- Design the look and feel of both apps, while unifying the backend with the frontend through the api created with .NET (C#).

Junior Software Analyst, Dronena S. A., Sep 2023 - Jan 2024
Dominican Republic

- Create queries and store procedures for the endpoints of the api (C# .NET), while solving the problems of the customers directly from SQL Server.
- Complete all the tasks the Team Leader left me in Azure DevOps at the time I was using the Agile methodology.
- Collaborate with the time adapting my time of work to give solution to the conflicts of everyday with the store department.

Dealer Support, Metro By T-Mobile, Sep 2024 - Present
6909 Market St, Upper Darby Township, PA 19082

Skills
